

RECTIFIER/REGULATOR INSTALLATION INSTRUCTIONS FOR KAWASAKI KLX450R WITH REWOUND SINGLE OUTPUT STATOR

This rectifier/regulator is necessary for KLX450R's whose stators have been rewound to single-output. Note that all of the bike's electrical accessories including the lighting system must now be powered DC via the battery. The stock headlight & taillight connectors can no longer be used to power the lighting system unless fed with DC power.

1. Unplug & remove the stock rectifier/regulator from its mounting location under the left side panel.
2. Install the Baja Designs rectifier/regulator as shown in the Photo 1 using the provided mounting hardware. The Baja Designs rectifier/regulator plugs into the same connector that the stock rectifier/regulator plugged into (Photo 2.)
